All DELTA inverters mentioned within this self-declaration are not capable of feeding-in DC residual currents due to their design.

They fulfill this requirement in accordance with DIN VDE 0100-712 and IEC 60364-7-712:2002.

The possibilities of faults were examined without taking the integrated residual-current monitoring unit (RCMU) into account. When examining these faults in terms of the currently valid installation standards, no danger in combination with a type A upstream RCD can occur. Therefore faults that would otherwise require the use of a type B residual-current device due to the inverter can be excluded.

For all inverters mentioned above external RCD type A can be used according to local installation requirements.
